PRICOL LIMITED | Coimbatore

Apprenticeship - Process Engineer

Assembly Line Specialist with experience in installing assembly lines for LED backlight modules and instrument clusters. Involved in purchasing SMT machines for PCB assembly, vendor handling, machine panel wiring, and material handling in electronic stores.

Project

Zita Applicant Tracking System (ATS)

Designed and developed the UI and functionality for an Applicant Database application, optimizing application modules for improved performance. Played a key role in developing automated emailing functionality with user-customizable email templates and contributed to the creation of an Email Template Hub module. Worked on AI-based feature development and revamped application modules based on requirements. Additionally, contributed to the UI and functionality development of the Subscription module.

Standalone API

Played a key role in developing a separate API module feature in the ZITA ATS application, handling account creation for API access in AWS. Worked on both Postman testing and the development of a standalone application for the API module. Contributed to the UI and functionality development of the Subscription module and participated in the deployment of the application using AWS Amplify. Additionally, involved in API code building to enhance system functionality.
